
MODULE SPECIFICATION

Vocabulary

Final Decisions & Flow

Level and Subskill as two dimensions.

Diagnose, teach what is needed, prove the improvement.

Assess → Learn → Practice → Re-assess → Review → Progress

CONTENTS

Document Overview

1	Overall Architecture	10	Vocabulary Practice
2	Vocabulary Subskills	11	Practice Is Adaptive
3	Vocabulary Pre-Assessment	12	Practice Feedback
4	Question Metadata	13	Learning Loop
5	Do NOT Use One Correct Answer as Mastery	14	Practice Should Reflect the Weak Subskill
6	Pre-Assessment Result	15	Post-Assessment
7	Personalized Vocabulary Path	16	Post-Assessment Purpose
8	Vocabulary Learning Content	17	Vocabulary Outcome
9	Learning Content Should Be Chunked	18	Complete Vocabulary Flow

SECTION 01

Overall Architecture

Vocabulary uses **two dimensions**:

Vocabulary

|

|— Level 1 – Foundation

|— Level 2 – Developing

|— Level 3 – Intermediate

|— Level 4 – Advanced

Roles

- **Level** → determines curriculum progression and vocabulary difficulty.
- **Subskill** → determines the learner's vocabulary competency and weaknesses.
- The same subskills can appear at multiple levels, but the **words, contexts, and complexity change**.

Do **not** use Easy / Medium / Hard as learner-facing levels.

The architecture should be data-driven so Level 5/6 can be added later without redesigning the UX.

SECTION 02

Vocabulary Subskills

The vocabulary curriculum is organized around competency areas.

A practical V1 set:

1. Word Meaning / Contextual Meaning
2. Word Usage
3. Synonyms & Antonyms
4. Collocations
5. Phrasal Verbs
6. Word Formation

Not every subskill needs equal amounts of content at every level.

For example:

Level 1:

Word Meaning → high importance

Phrasal Verbs → limited

Level 4:

Word Meaning → still important

Phrasal Verbs → much more important

Collocations → much more important

SECTION 03

Vocabulary Pre-Assessment

Purpose

The pre-assessment answers **two questions**:

1. What vocabulary level is the learner currently at?
2. Which vocabulary subskills need improvement?

It is **not** intended to test every word.

Base assessment

Use approximately:

5 questions × 4 levels = 20 possible questions

At each level:

Level 1

Q1 → Subskill A

Q2 → Subskill B

Q3 → Subskill C

Q4 → Subskill D

Q5 → Subskill E

Level 2

Q1 → Subskill A

...

So every level gets **coverage across the important subskills**.

Adaptive progression

The learner does not necessarily need to answer all 20.

```
Level 1
  ↓
5 questions
  ↓
Strong enough?
├─ Yes → Level 2
└─ No  → current ability around Level 1
```

Then:

```
Level 2
  ↓
5 questions
  ↓
Strong enough?
├─ Yes → Level 3
└─ No  → current ability around Level 2
```

And so on.

Borderline case

If performance is unclear:

```
5 questions
  ↓
Borderline
  ↓
1–2 additional questions
  ↓
Better evidence
```

This prevents one lucky/unlucky answer from determining the level.

SECTION 04

Question Metadata

Every vocabulary assessment item should contain:

```
Question
├─ Level
├─ Subskill
├─ Difficulty
└─ Question Type
```

Example:

```
Question:
"She was reluctant to accept the offer."

Level:      3
Subskill:   Word Usage
Difficulty: Medium
Type:       Multiple Choice
```

This allows EngCoach to calculate both:

```
Overall Level
+
Subskill Competency Profile
```

SECTION 05

Do NOT Use One Correct Answer as Mastery

One correct answer only means:

The learner got this particular item correct.

It does **not** mean:

The learner has mastered this subskill.

Therefore:

1 question	→ signal
Multiple questions	→ stronger evidence
Repeated learning + practice + post-assessment	→ mastery evidence

For Vocabulary, use learner-facing competency states such as:

Comfortable

Developing

Needs Practice

rather than immediately calling a subskill "Mastered."

SECTION 06

Pre-Assessment Result

Example:

EXAMPLE

Vocabulary Level — Level 3 · Intermediate

YOUR VOCABULARY PROFILE

Word Meaning	82%	Comfortable
Word Usage	76%	Comfortable
Synonyms & Antonyms	65%	Developing
Collocations	43%	Needs Practice
Phrasal Verbs	38%	Needs Practice
Word Formation	71%	Developing

This becomes the basis for personalization.

SECTION 07

Personalized Vocabulary Path

The system should **not make the learner study everything again.**

Instead:

```
Pre-Assessment
  ↓
Identify comfortable areas
  ↓
Identify weak areas
  ↓
Create focused path
```

Example:

Level 3 – Intermediate

Focus Areas:

1. Collocations
2. Phrasal Verbs
3. Synonyms & Antonyms

Skip / Reduce:

- ✓ Word Meaning
- ✓ Word Usage

The learner can therefore spend more time where they actually need it.

SECTION 08

Vocabulary Learning Content

Your original idea was:

Bangla meaning + example + Bangla translation + synonym + antonym.

We refined it to:

Vocabulary Card

- |
- ├ Word
- ├ Bangla meaning
- ├ Part of speech [when relevant]
- ├ Example sentence
 - └ Bangla translation
- ├ Usage / Context [when relevant]
- ├ Synonyms
- ├ Antonyms
- └ Collocations [when relevant]

Important principle

Not every card needs every field.

For example, some words need detailed usage information; others don't.

Avoid information overload.

Example

RELUCTANT

Adjective

Bangla:

অনিচ্ছুক

Example:

He was reluctant to accept the offer.

বাংলা:

সে প্রস্তাবটি গ্রহণ করতে অনিচ্ছুক ছিল।

Usage:

reluctant + to + verb

Synonyms:

unwilling, hesitant

Antonyms:

willing, eager

Common expression:

reluctant to agree

The goal isn't simply:

"Memorize reluctant = অনিচ্ছুক."

It is:

Understand the word + recognize it + know how it behaves + use it.

SECTION 09

Learning Content Should Be Chunked

Do **not** present 30–40 vocabulary cards continuously.

Instead:

```
Learning Chunk
  ↓
5–10 vocabulary cards
  ↓
Short Practice
  ↓
Next Learning Chunk
  ↓
5–10 vocabulary cards
  ↓
Short Practice
  ↓
...
```

The 5–10 is a guideline, **not a rigid rule**.

The actual chunk size can depend on:

- number of words
- complexity
- topic/context
- learner level
- subskill
- cognitive load

SECTION 10

Vocabulary Practice

Practice follows the recently learned vocabulary.

The general progression is:

```
Recognition
  ↓
Understanding
  ↓
Usage
  ↓
Recall
  ↓
Production
```

Practice types

1. Meaning Recognition

What does **reluctant** mean?

2. Contextual Meaning

Rafi was reluctant to join the competition because he was nervous.

What does **reluctant** mean here?

3. Correct Usage

Which sentence uses **reluctant** correctly?

4. Synonym / Antonym

Which word is closest in meaning to **reluctant**?

5. Collocation

She was reluctant ____ accept the offer.

to ✓

6. Recall / Production

Complete: She was reluctant to _____.

or eventually:

Make a sentence using "reluctant."

Production can be used selectively, especially at higher levels.

SECTION 11

Practice Is Adaptive

You don't need:

Every lesson = exactly 10 questions

Instead:

Simple lesson
→ 3–5 practice questions

More difficult lesson
→ 5–8 questions

Weak subskill
→ more questions targeting that subskill

So practice is determined by **learning content + learner needs**.

SECTION 12

Practice Feedback

Practice provides **immediate feedback**.

Example:

Q:
She was reluctant ____ accept the offer.

Learner:
accept x

Feedback:

Not quite.

We use:

reluctant + to + verb

Example:
She was reluctant to accept the offer.

Try another one.

The learner gets another opportunity to apply the concept.

SECTION 13

Learning Loop

The core Vocabulary learning loop becomes:

This is much better than:

30 cards → 20 questions

because the learner retrieves recently learned words while they're still fresh.

SECTION 14

Practice Should Reflect the Weak Subskill

Suppose the pre-assessment says:

Collocations → Needs Practice

Then the personalized lesson should emphasize:

Learn:
word + common collocations

Practice:
choose correct collocation
complete collocation
identify incorrect combination
use collocation in context

If the weakness is **Contextual Meaning**:

Learn:
word + multiple contextual examples

Practice:
infer meaning from sentence
choose appropriate word
distinguish similar words

Therefore:

The pre-assessment directly influences both the content and the practice.

SECTION 15

Post-Assessment

The **same overall philosophy** applies to Post-Assessment.

But:

Do not repeat the exact pre-assessment questions.

Use:

Same:
Level
Subskill
Difficulty range
Question types

Different:
Words
Sentences
Questions
Contexts

This measures whether the learner can actually apply what they learned.

SECTION 16

Post-Assessment Purpose

Post-assessment measures:

Then compare:

EXAMPLE

Pre — Collocations	43%
Post — Collocations	78%
Improvement	+35 pp

This gives the learner **evidence of improvement**.

SECTION 17

Vocabulary Outcome

Example:

LEVEL 3 — STRONG PROGRESS

You strengthened the areas that needed the most practice.

BEFORE → AFTER

Collocations	43% → 78% ↑
Phrasal Verbs	38% → 72% ↑
Synonyms & Antonyms	65% → 81% ↑

Then:

Next Step

✓ Continue Level 3

or

→ Ready to check Level 4

The actual decision comes from the assessment data, not a manually selected UI state.

SECTION 18

Complete Vocabulary Flow

This is the final high-level flow I would use:

The core philosophy

LEVEL	How advanced is the learner?
SUBSKILL	What vocabulary ability needs work?
ASSESSMENT	Diagnose
LEARNING	Teach
PRACTICE	Build ability
POST-ASSESSMENT	Measure improvement
OUTCOME	Show evidence + decide next step

This gives Vocabulary its own **adaptive identity**, while still following the same overall EngCoach principle as Grammar:

| Assess → Learn → Practice → Re-assess → Review → Progress.
